

## Project Description

Title: Random Movie Night Generator

Description: The Random Movie Night Generator app helps users decide on a movie to watch by letting them input their preferences (genre, decade, mood). The app then generates a random movie suggestion that fits these filters, providing details like the movie's title, description, poster, and rating. Users can save movies to their "Watch Later" list or mark them as "Watched." The app aims to make movie nights easier and more fun by taking the guesswork out of finding a movie.
